A-level MATHEMATICS

Paper 2

Wednesday 12 June 2019

Morning

Time allowed: 2 hours

Materials

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

Section A

Do not write outside the box

Answer **all** questions in the spaces provided.

- 1 Identify the graph of $y = 1 - |x + 2|$ from the options below.

Tick (\checkmark) **one** box.

[1 mark]

0 2

Jun19/7357/2

Do not write
outside the
box

2 Simplify $\sqrt{a^{\frac{2}{3}} \times a^{\frac{2}{5}}}$

Circle your answer.

[1 mark]

$$a^{\frac{2}{15}}$$

$$a^{\frac{4}{15}}$$

$$a^{\frac{8}{15}}$$

$$a^{\frac{16}{15}}$$

3 Each of these functions has domain $x \in \mathbb{R}$

Which function does **not** have an inverse?

Circle your answer.

[1 mark]

$$f(x) = x^3$$

$$f(x) = 2x + 1$$

$$f(x) = x^2$$

$$f(x) = e^x$$

Do not write
outside the
box

- 4 $x^2 + bx + c$ and $x^2 + dx + e$ have a common factor $(x + 2)$

Show that $2(d - b) = e - c$

Fully justify your answer.

[4 marks]

5 Solve the differential equation

Do not write outside the box

$$\frac{dt}{dx} = \frac{\ln x}{x^2 t} \quad \text{for } x > 0$$

given $x = 1$ when $t = 2$

Write your answer in the form $t^2 = f(x)$

[7 marks]

Turn over for the next question

Turn over ►

Do not write
outside the
box

6

A curve has equation

$$y = a \sin x + b \cos x$$

where a and b are constants.

The maximum value of y is 4 and the curve passes through the point $\left(\frac{\pi}{3}, 2\sqrt{3}\right)$ as shown in the diagram.

Find the exact values of a and b .

[6 marks]

*Do not write
outside the
box*

Turn over for the next question

Turn over ►

0 7

Jun19/7357/2

Do not write
outside the
box

- 7 (a) Sketch the graph of any cubic function that has **both** three distinct real roots **and** a positive coefficient of x^3

[2 marks]

- 7 (b) The function $f(x)$ is defined by

$$f(x) = x^3 + 3px^2 + q$$

where p and q are constants and $p > 0$

- 7 (b) (i) Show that there is a turning point where the curve crosses the y -axis.

[3 marks]

7 (b) (ii) The equation $f(x) = 0$ has three distinct real roots.

Do not write outside the box

By considering the positions of the turning points find, in terms of p , the range of possible values of q .

[5 marks]

Do not write
outside the
box

- 8 Theresa bought a house on 2 January 1970 for £8000.

The house was valued by a local estate agent on the same date every 10 years up to 2010.

The valuations are shown in the following table.

Year	1970	1980	1990	2000	2010
Valuation price	£8 000	£19 000	£36 000	£82 000	£205 000

The valuation price of the house can be modelled by the equation

$$V = pq^t$$

where V pounds is the valuation price t years after 2 January 1970 and p and q are constants.

- 8 (a) Show that $V = pq^t$ can be written as $\log_{10} V = \log_{10} p + t \log_{10} q$

[2 marks]

Do not write
outside the
box

- 8 (b) The values in the table of $\log_{10} V$ against t have been plotted and a line of best fit has been drawn on the graph below.

t	0	10	20	30	40
$\log_{10} V$	3.90	4.28	4.56	4.91	5.31

Question 8 continues on the next page

Turn over ►

outside the
box*

- 8 (c)** Determine the year in which Theresa's house will first be worth half a million pounds.
[3 marks]

- 8 (d)** Explain whether your answer to part (c) is likely to be reliable.
[2 marks]

Turn over for the next question

Turn over ►

1 3

Jun19/7357/2

Do not write
outside the
box

- 9 (a) Show that the first two terms of the binomial expansion of $\sqrt{4 - 2x^2}$ are

$$2 - \frac{x^2}{2}$$

[2 marks]

- 9 (b) State the range of values of x for which the expansion found in part (a) is valid.

[2 marks]

Do not write
outside the
box

- 9 (c) Hence, find an approximation for

$$\int_0^{0.4} \sqrt{\cos x} \, dx$$

giving your answer to five decimal places.

Fully justify your answer.

[4 marks]

- 9 (d) A student decides to use this method to find an approximation for

$$\int_0^{1.4} \sqrt{\cos x} \, dx$$

Explain why this may not be a suitable method.

[1 mark]

Turn over for Section B

Turn over ►

Section B

Do not write outside the box

Answer **all** questions in the spaces provided.

- 10** The diagram below shows a velocity-time graph for a particle moving with velocity $v \text{ m s}^{-1}$ at time t seconds.

Which statement is correct?

Tick (\checkmark) one box.

[1 mark]

The particle was stationary for $9 \leq t \leq 12$

The particle was decelerating for $12 \leq t \leq 20$

The particle had a displacement of zero when $t = 6$

The particle's speed when $t = 4$ was -12 m s^{-1}

- 11 A wooden crate rests on a rough horizontal surface.

Do not write
outside the
box

The coefficient of friction between the crate and the surface is 0.6

A forward force acts on the crate, parallel to the surface.

When this force is 600 N, the crate is on the point of moving.

Find the weight of the crate.

Circle your answer.

[1 mark]

1000 N

100 kg

360 N

36 kg

- 12 A particle, under the action of two constant forces, is moving across a perfectly smooth horizontal surface at a constant speed of 10 m s^{-1}

The first force acting on the particle is $(400\mathbf{i} + 180\mathbf{j}) \text{ N}$.

The second force acting on the particle is $(p\mathbf{i} - 180\mathbf{j}) \text{ N}$.

Find the value of p .

Circle your answer.

14

A metal rod, of mass m kilograms and length 20 cm, lies at rest on a horizontal shelf.

The end of the rod, B , extends 6 cm beyond the edge of the shelf, A , as shown in the diagram below.

**14 (a)**

The rod is in equilibrium when an object of mass 0.28 kilograms hangs from the midpoint of AB .

Show that $m = 0.21$

[3 marks]

- 14 (b) The object of mass 0.28 kilograms is removed.

Do not write outside the box

A number, n , of identical objects, each of mass 0.048 kg, are hung from the rod all at a distance of 1 cm from B .

Find the maximum value of n such that the rod remains horizontal.

[4 marks]

- 14 (c) State one assumption you have made about the rod.

[1 mark]

Turn over for the next question

Turn over ►

15 Four buoys on the surface of a large, calm lake are located at A , B , C and D with position vectors given by

Do not write outside the box

$$\overrightarrow{OA} = \begin{bmatrix} 410 \\ 710 \end{bmatrix}, \overrightarrow{OB} = \begin{bmatrix} -210 \\ 530 \end{bmatrix}, \overrightarrow{OC} = \begin{bmatrix} -340 \\ -310 \end{bmatrix} \text{ and } \overrightarrow{OD} = \begin{bmatrix} 590 \\ -40 \end{bmatrix}$$

All values are in metres.

- 15 (a)** Prove that the quadrilateral $ABCD$ is a trapezium but **not** a parallelogram.

[5 marks]

- 15 (b) A speed boat travels directly from B to C at a constant speed in 50 seconds.

Find the speed of the boat between B and C .

[4 marks]

Jun19/7357/2

*Do not write
outside the
box*

16 An elite athlete runs in a straight line to complete a 100-metre race.

Do not write outside the box

During the race, the athlete's velocity, $v \text{ m s}^{-1}$, may be modelled by

$$v = 11.71 - 11.68e^{-0.9t} - 0.03e^{0.3t}$$

where t is the time, in seconds, after the starting pistol is fired.

- 16 (a)** Find the maximum value of v , giving your answer to one decimal place.

Fully justify your answer.

[8 marks]

Do not write outside the box

- 16 (b)** Find an expression for the distance run in terms of t .

[6 marks]

Question 16 continues on the next page

Turn over ►

- 16 (c) The athlete's actual time for this race is 9.8 seconds.

Comment on the accuracy of the model.

17

Lizzie is sat securely on a wooden sledge.

Do not write outside the box

The combined mass of Lizzie and the sledge is M kilograms.

The sledge is being pulled forward in a straight line along a horizontal surface by means of a light inextensible rope, which is attached to the front of the sledge.

This rope stays inclined at an acute angle θ above the horizontal and remains taut as the sledge moves forward.

The sledge remains in contact with the surface throughout.

The coefficient of friction between the sledge and the surface is μ and there are no other resistance forces.

Lizzie and the sledge move forward with constant acceleration, $a \text{ m s}^{-2}$

The tension in the rope is a constant T Newtons.

17 (a)

Show that

$$T = \frac{M(a + \mu g)}{\cos \theta + \mu \sin \theta}$$

[7 marks]

Do not write outside the box

- 17 (b)** It is known that when $M = 30$, $\theta = 30^\circ$, and $T = 40$, the sledge remains at rest. Lizzie uses these values with the relationship formed in part (a) to find the value for μ . Explain why her value for μ may be incorrect.
